

Arjun Giriraj Day 15

- Challenge solved: **7** and points obtained: **146**
1. Which challenge was easiest, and why?
Challenge 4 was the easiest, because it asked which network service should be investigated, as it is obvious that ping worked but getent failed due to name does not resolve so the network service should be investigated for the name-related thing, which is DNS.
 2. Which challenge was hardest, and what made it hard?
Challenge 2 was the hardest because it has asked for the hidden files, and I was forcing ls -a flag in every possible format, but it was not the flag itself as the flag was supposed to be the hidden files found.
 3. Which Linux commands did you use during the CTF?
To be honest i did not need to use any linux command during CTF because it was all based on how we think.
 4. What did you learn about permissions?
It's numeric values.
 5. What did you learn about DNS?
That the name resolve problem is directly related to the DNS.
 6. What did you learn about ports?
That the service on open ports are ready for connection.
 7. What did you learn from reading Nmap output?
The open, closed, and filtered ports.
 8. What would you revise before the next CTF?
To read the question wisely before attempting to force any flag there.
